SUMMARY

Frontend platform and product engineering lead building **large-scale web experiences**, **UI platforms**, AI-assisted workflows, and developer tooling for enterprise engineering organizations. Lead engineer across the **statefarm.com Digital Experience product suite**, spanning **8 product teams and 40–50 engineers/analysts**. Steward **SFDS**, a Lit/Web Components platform used by **1000+ engineers/designers**, with React integration, accessibility/compliance gates, API contracts, release infrastructure, observability, CDN/npm delivery, and production support.

CORE SKILLS

FRONTEND PLATFORM	React • TypeScript • JavaScript • Lit / Web Components • HTML / CSS • Angular • SPA Architecture Cross-Framework Integration • SSR / Runtime Integration • State / Eventing
QUALITY + PERFORMANCE	Performance Engineering • Instrumentation • Observability • Dynatrace RUM • CloudWatch • Testing Quality Gates • CI/CD • npm / CDN Delivery • GitOps Release Controls
AI + DEVELOPER TOOLS	AI-Native UX • Agentic Workflows • MCP Servers • Structured AI Output • AI Review Agents • Validator CLIs GitHub / GitLab PR Automation • Human-in-the-Loop Review
SYSTEMS + APIS	GraphQL • REST • API Contract Design • Node.js • Java • AWS • Kafka • Distributed Workflows • Design Systems Accessibility / WCAG

EXPERIENCE

State Farm Insurance

Enterprise Technology, Digital Experience — *statefarm.com Product Suite*

May 2020 – Present

Dallas–Fort Worth, TX (Hybrid)

Senior Technology Engineer — Digital Experience Platform Lead

Mar 2026 – Present

- Promoted from Lead Engineer with expanded scope across the **entire statefarm.com Digital Experience product suite**; set frontend platform strategy, AI tooling direction, and modernization patterns across **8 product teams and 40–50 engineers/analysts**.
- Built an **AI-assisted Figma-to-code workflow** that turns designed page intent into reviewed sf-ui Web Component implementations, combining Figma MCP, deterministic hooks, and human review to improve UI consistency before code is treated as production-ready.
- Built developer-facing validation tooling integrated into local hooks and **GitHub/GitLab PR workflows**, reviewing **50+ MRs/PRs** for design-system alignment, legacy references, accessibility risks, and implementation quality.
- Drive SFDS migration across public-facing statefarm.com Digital Experience; **~30% public DX adoption** achieved today, with **10+ migrated pages** across public, internal, and agent-facing surfaces and a path to **100+ consuming teams**.
- Contribute to statefarm.com **GraphQL migration strategy**, shaping API contracts, service boundaries, and integration patterns for customer-facing web applications across product teams.
- Built a Node.js sidecar using DSDOM to server-render Web Component shadow DOM and hydrate on the frontend, enabling SFDS inside AEM content-fragment pages without replacing the CMS model across hundreds of unauthenticated pages.
- Own high-availability SFDS delivery via redundant CloudFront/Akamai CDN and npm packages, with Dynatrace/CloudWatch dashboards, alerting, quality signals, and GitOps release controls.

Lead Software Engineer — State Farm Design System (SFDS)

May 2023 – Mar 2026

- Led engineering for State Farm’s canonical enterprise UI platform, used by **1000+ engineers/designers**; earned C-suite buy-in for SFDS as the target design system for statefarm.com migration.
- Architected **sf-ui**, an accessible, framework-agnostic Lit/Web Components platform with **70+ primitives**, enabling consistent product UI across React, Angular, AEM, and mixed frontend architectures.
- Created the SFDS documentation and delivery platform on Starlight/Astro; owned npm publishing, CDN distribution, release governance, CI/CD, versioning, changelogs, and production support for consuming teams.
- Partnered with React-heavy product teams to integrate SFDS Web Components into SPA architectures, resolving state, eventing, SSR/runtime, accessibility, and AEM constraints across statefarm.com.
- Built a Figma Variables to W3C design-token plugin in TypeScript, giving designers a canonical token source in Figma with auditable engineering handoff.
- Ran designer/engineer interviews, focus groups, usability tests, and A/B tests to shape roadmap decisions for both customer-facing UX and internal developer/designer experience.

Software Engineer / Software Development Co-op — Telematics + Platform Services

May 2020 – May 2023

- Designed and built **Node.js APIs on AWS Lambda** and **Java backend services** for Drive Safe & Save telematics experiences; implemented event-driven workflows with Kafka brokers to process enrollment events and trigger downstream account/state updates.

SELECTED PUBLIC + AI WORK

DesignRail [GitHub](#) — Frontend platform experiment for AI-assisted UI implementation review; maps design intent to component proposals, validates accessibility/token/variant compliance, persists human review decisions through GraphQL, and exports production-ready code and agent briefs.

zod-ai-tool [GitHub](#) [npm](#) — TypeScript package deriving Anthropic/OpenAI/Gemini tool definitions from one Zod schema with runtime validation, strict-mode handling, CI matrix testing, coverage gates, and npm provenance.

Agent Convention Feedback Platform — Executive-requested AI platform for insurance agents; captured **800+ datapoints** from **197 participants** and synthesized themes into dashboards with drilldowns, filtering, Excel exports, monitoring, and production recovery workflows.

EDUCATION & VOLUNTEERING

Utah State University — B.S. Computer Science, Magna Cum Laude (3.9 / 4.0 GPA)

Japanese-speaking volunteer leader, Fukuoka, Japan — led trainings for 50+ volunteers and taught English to 100+ students.
