

Connor Dibble

FRONTEND PLATFORM ENGINEER

dibbleconnor@gmail.com / (469) 971-6422 / connordibble.dev / GitHub / LinkedIn

PLATFORMS TEAMS CAN INHERIT Builds shared frontend infrastructure and developer tooling from recurring product problems, then earns adoption through clear contracts, supported paths, and production ownership.

8 teams / 50+ engineers

Cross-team technical direction

1,000+ practitioners

Shared platform adoption and support

5+ to Lead / 3 to Lead II

Engineers mentored through promotion

EXPERIENCE

State Farm Insurance

Enterprise Technology / Digital Experience / statefarm.com

Senior Software Engineer | Digital Experience Platform Lead

Mar 2026 – Present

Official State Farm title: Senior Technology Engineer

- Promoted to set frontend standards and customer-experience direction across **8 product teams and 50+ engineers**. Partner with design, platform, identity, mobile, and accessibility leads; coach engineers through architecture and code review, including **5+ to Lead and 3 to Lead II**.
- Built an internal SFUI page generator for **AI-assisted Figma-to-code**, with manifest-backed skills and hook/CI validation for APIs, slots, and events. The workflow supported one representative page moving from about **two weeks to one day**, with human approval.
- Built and **retired** a RAG context service with document ingestion, vector retrieval, and MCP after live docs, thin skills, and deterministic checks matched its measured results without dedicated infrastructure.
- Lead **Core Web Vitals** measurement across SSR/AEM and client-rendered applications: standardized LCP for server-rendered pages, defined Dynatrace total-render/load signals for client flows, and measured instrumentation overhead against an under-three-second budget.
- Introduced a Node.js and **Declarative Shadow DOM** sidecar to server-render and hydrate SFDS Web Components in AEM content-fragment pages, supporting thousands of statefarm.com static pages while preserving CMS authoring and improving technical SEO.
- Extended the shared statefarm.com header with centralized Okta refresh/session behavior and an **English/Spanish Lit localization** control that switches translated content across the full page.
- Reworked CloudFront/npm delivery with tiered caching, content-hashed assets, and selective CI invalidation. Cut request traffic and delivery cost to about **one-third of peak**, with RUM, alerting, and GitOps rollback.

Lead Software Engineer I → II | State Farm Design System

May 2023 – Mar 2026

- Architected **sf-ui**, a Lit/Web Components platform with accessibility built into **70+ primitives**, used by **1,000+ engineers and designers**. Received the **Digital Accessibility Champion Award** for that work.
- Built the surrounding platform: TypeScript Figma Variables-to-W3C token pipeline, versioned Astro/Starlight docs, npm/CDN delivery, CI/CD, release/deprecation policy, observability, and production support.
- Ran interviews and six team pilots; supported adoption through office hours, migration paths, and a champion network that helped secure executive support.

Software Engineer / Software Development Co-op | Telematics + Platform Services

May 2020 – May 2023

- Built React applications and microfrontends, Node.js APIs on AWS Lambda, and Java/Kafka services for asynchronous telematics enrollment and downstream account-state workflows.

SELECTED WORK

DesignRail / Open-source React/Apollo review gate for AI page generators. Typed GraphQL carries schema-backed Web Component mappings and human decisions; rejected mappings cannot reach HTML, React, or agent-brief exports.

dibble / Published 11 portable plugins and 12 skills for Claude Code/Codex. Zero-dependency checks and CI cover design systems, visual review, tool safety, and evidence tracing, backed by 148 tests and 95%+ line coverage.

Agent Convention Feedback Platform / Shipped an executive-requested AI feedback system in about two months. Turned 800+ datapoints from 197 participants into an interactive dashboard; every synthesized theme links to source comments.

TECHNICAL RANGE

Web + design: TypeScript, React, Angular, Next.js, Lit/Web Components, HTML/CSS, AEM, SSR, Core Web Vitals, technical SEO, Figma/MCP, W3C design tokens, accessibility

Systems + AI: Node.js, Java, GraphQL/REST, AWS, Kafka, AI/agent systems, MCP/RAG, deterministic validation, CI/CD, observability, CDN caching

EDUCATION

Utah State University / B.S. Computer Science, Magna Cum Laude, 3.9/4.0

Japanese-speaking volunteer leader, Fukuoka, Japan
