## SUMMARY

Senior frontend/platform engineer specializing in design tooling, design systems, and AI-accelerated design-to-code workflows. Lead engineer across the **statefarm.com Digital Experience product suite** spanning **8 product teams and 40-50 engineers/analysts**; principal builder for **SFDS**, State Farm's enterprise design system used by 1000+ engineers and designers. Deep experience with **React, TypeScript, Figma Plugin/API, Figma MCP, Node.js, Lit/Web Components, GraphQL, AWS, observability, and production support**.

## CORE SKILLS

|                     |                                                                                                                                                                  |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Design Tooling      | Figma Plugin/API, Figma MCP/REST, W3C design tokens, design-to-code automation, component governance, accessibility, documentation systems                       |
| Frontend / Platform | React, Angular, TypeScript, JavaScript, Lit/Web Components, SPA architecture, complex state management, cross-framework integration, AEM integration             |
| Backend / Cloud     | Node.js, AWS Lambda, REST, GraphQL, Java, serverless architecture, npm/CDN delivery, GitLab CI/CD, release automation                                            |
| AI + Reliability    | Agent workflows, MCP servers/plugins, SKILL.md instruction systems, deterministic hooks, GitLab webhook agents, Dynatrace RUM, AWS CloudWatch, incident response |

## EXPERIENCE

### State Farm Insurance

**May 2020 – Present**  
*Dallas-Fort Worth, TX (Hybrid)*

*Enterprise Technology, Digital Experience – statefarm.com Product Suite*

#### Senior Technology Engineer – Digital Experience Platform Lead

*Mar 2026 – Present*

- Promoted from Lead Engineer with expanded scope across the **entire statefarm.com Digital Experience product suite**; set technical direction for SFDS, frontend platform strategy, and AI design tooling across **8 product teams and 40-50 engineers/analysts**.
- Drive executive-backed migration strategy toward **100% Digital Experience adoption of SFDS by year end**; partner with analytics teams to track component usage, CDN consumption, npm adoption, and migration progress.
- Built an **AI design-to-code pipeline** using Figma MCP, SKILL.md instructions, and deterministic agent hooks, compressing Figma-to-Web-Component implementation from two weeks to one day.
- Built a **GitLab webhook AI compliance agent** that reviews merge requests for SFDS compliance and posts inline feedback, shifting governance left and reducing review bottlenecks.
- Built a Node.js sidecar service enabling SFDS Web Components inside AEM-rendered pages, unblocking a major statefarm.com surface area for design-system adoption.
- Serve as primary technical escalation point for SFDS consumers across statefarm.com, triaging integration issues, reviewing implementation patterns, and coordinating fixes across platform and product teams.
- Contribute to front-line resilience for statefarm.com through GameDay/tabletop exercises, incident response, Dynatrace RUM, AWS CloudWatch, CDN health, and runtime reliability for design-system consumers.

#### Lead Software Engineer – State Farm Design System (SFDS)

*May 2023 – Mar 2026*

- Led design-system engineering for State Farm's canonical enterprise design platform, used by thousands of engineers and hundreds of designers; earned C-suite buy-in for SFDS as the target system for statefarm.com migration.
- Architected **sf-ui**, an accessible, framework-agnostic component platform on Lit/Web Components with **70+ components**, replacing legacy 1x components across hundreds of product pages and dozens of teams.
- Created the SFDS documentation platform on Starlight/Astro and own npm publishing, CDN distribution, release governance, GitLab CI/CD, versioning, and production support.
- Partner with React-heavy product teams to integrate SFDS Web Components into SPA architectures, resolving state, eventing, SSR/runtime, accessibility, and AEM integration constraints across statefarm.com.
- Built a **Figma Variables → W3C design-token plugin** in TypeScript, allowing designers to maintain canonical SFDS tokens directly in Figma without touching GitLab.
- Ran internal user research – designer/engineer interviews, focus groups, usability tests, and A/B tests – to shape roadmap decisions for both customer-facing UX and internal developer/designer experience.

#### Software Engineer / Software Development Co-op – Telematics + Platform Services

*May 2020 – May 2023*

- Designed and built Node.js APIs on AWS Lambda and Java backend services for telematics experiences on statefarm.com; contributed to enterprise GraphQL migration and DevOps/CI/CD tooling.

## SELECTED PROJECT - PLATFORM/AI

**Agent Convention Feedback App** – Hand-selected by senior executives to build a full-stack app with an OpenCode-powered AI chatbot for the State Farm agency convention, collecting, structuring, and synthesizing insurance-agent feedback at scale.

## EDUCATION & VOLUNTEERING

**Utah State University** – B.S. Computer Science, Magna Cum Laude (3.9 / 4.0 GPA)

Japanese-speaking volunteer leader, Fukuoka, Japan – led trainings for 50+ volunteers.
