SUMMARY

Enterprise developer-platform lead building agent context, evals, and governed distribution for statefarm.com Digital Experience. Direct SFDS, a platform used by **1000+ engineers and designers**, and establish paved roads for engineers and coding agents.

CORE SKILLS

PLATFORMS + AGENTS

Developer Platforms • Agent Context • Agent Plugins / Skills • MCP
RAG / Vector Retrieval • Agent Output Evals • Deterministic Validation

ENGINEERING

TypeScript • JavaScript • Node.js • React
Lit / Web Components • Java • GraphQL • REST • AWS

DELIVERY + RELIABILITY

GitHub CI/CD • npm / CDN Delivery • GitOps • Release Governance • Docs Platforms • Observability
Dynatrace RUM • CloudWatch • Production Reliability / Incident Response • Accessibility / WCAG

EXPERIENCE

State Farm Insurance

May 2020 – Present

Enterprise Technology, Digital Experience — statefarm.com Product Suite

Dallas–Fort Worth, TX (Hybrid)

Senior Technology Engineer — Digital Experience Platform Lead

Mar 2026 – Present

- Set technical direction for statefarm.com Digital Experience across **8 product teams** and **40–50 engineers and analysts**; mentor engineers, raise the technical bar, and improve culture and delivery without reporting authority.
- Built an SFDS **RAG-based context system** with a vector database, docs-ingestion pipeline, and MCP server, then led its replacement with live docs, installable SKILL.md files, and deterministic validation when the simpler design matched its results while eliminating dedicated server, index, and ingestion infrastructure.
- Built the **eval layer** for agent-generated UI: a deterministic CLI checking design-system compliance, legacy usage, and accessibility, wired into a GitHub review agent across **50+ PRs**.
- Established a governed **Figma-to-code workflow** combining Figma MCP, structured agent instructions, automated checks, and human review; cut representative page builds from **~2 weeks to ~1 day** while preserving design fidelity.
- Drive SFDS distribution and adoption as the statefarm.com migration target, giving **more than 100 teams** a standard migration path.
- Introduced a Node.js sidecar using **Declarative Shadow DOM** to server-render and hydrate SFDS Web Components in AEM, bringing SFDS to hundreds of unauthenticated pages without replacing the CMS model.
- Own high-availability SFDS delivery through redundant CloudFront/Akamai CDNs and npm; cut request volume to a third of peak using cache tiering and content-hashed builds, with Dynatrace RUM alerting, GitOps release controls, and live incident-bridge support.

Lead Software Engineer — State Farm Design System (SFDS)

May 2023 – Mar 2026

- Architected **sf-ui**, a governed Lit/Web Components platform with **70+ accessible primitives**, used by **1000+ engineers/designers** and supporting React, Angular, AEM, and mixed frontend architectures.
- Engineered a **Figma Variables to W3C design-token pipeline** in TypeScript, making design decisions typed, versioned artifacts with an auditable engineering handoff into the component platform.
- Established the platform operating model: versioned Astro/Starlight docs, npm/CDN distribution, GitHub CI/CD, deprecation windows, compliance reviews, release governance, and on-call production support.
- Defined and documented React integration patterns that resolved complex state, custom eventing, SSR/hydration, accessibility, and AEM constraints for consuming teams.
- Drove adoption through interviews, pilot measurement, office hours, and an embedded champion network; mentored product engineers through migrations, used qualitative and usage data to set the roadmap, and helped secure C-suite backing for an enterprise rollout.

Software Engineer / Software Development Co-op — Telematics + Platform Services

May 2020 – May 2023

- Owned frontend direction for the Drive Safe & Save suite of **React apps and micro-frontends**; built **Node.js APIs on AWS Lambda** and **Java services** with Kafka event-driven workflows for enrollment processing.

SELECTED PROJECTS

dibble [GitHub npm](#) — Built and published a versioned catalog of **11 coding-agent plugins** distributed through Claude Code, Codex, and npm. Its zero-dependency checks support agent workflows and CI gates, with marketplace validation, automated semantic releases, and **90+ tests**.

agent-readiness-kit [GitHub npm](#) — Published TypeScript CLI that evaluates repository readiness for coding agents across instructions, skills, repeatable gates, review boundaries, CI, and docs; enforces thresholds and emits GitHub annotations.

Agent Convention Feedback Platform — Led an executive-requested AI platform from concept to a live convention pilot in **two months**; captured **800+ datapoints** from **197 participants** and delivered traceable synthesis, dashboards, monitoring, and GitOps rollback.

EDUCATION & VOLUNTEERING

Utah State University — B.S. Computer Science, Magna Cum Laude (3.9/4.0) • Japanese-speaking volunteer leader, Fukuoka, Japan — led trainings for 50+ volunteers and taught English to 100+ students.
